

The Cyclistic Bike-share Analysis Case Study

Understanding Usage Patterns to Convert Casual Riders into Annual Members

Prepared By: Rayan Ibrahim | Data Analyst
September 2026

Business Task:

- This report analyzes how annual members and casual riders use Cyclistic bikes differently, in order to help the marketing team, design a strategy to convert casual riders into annual members.
- Key stakeholders: Lily Moreno (Director of Marketing) and the Cyclistic Executive Team.

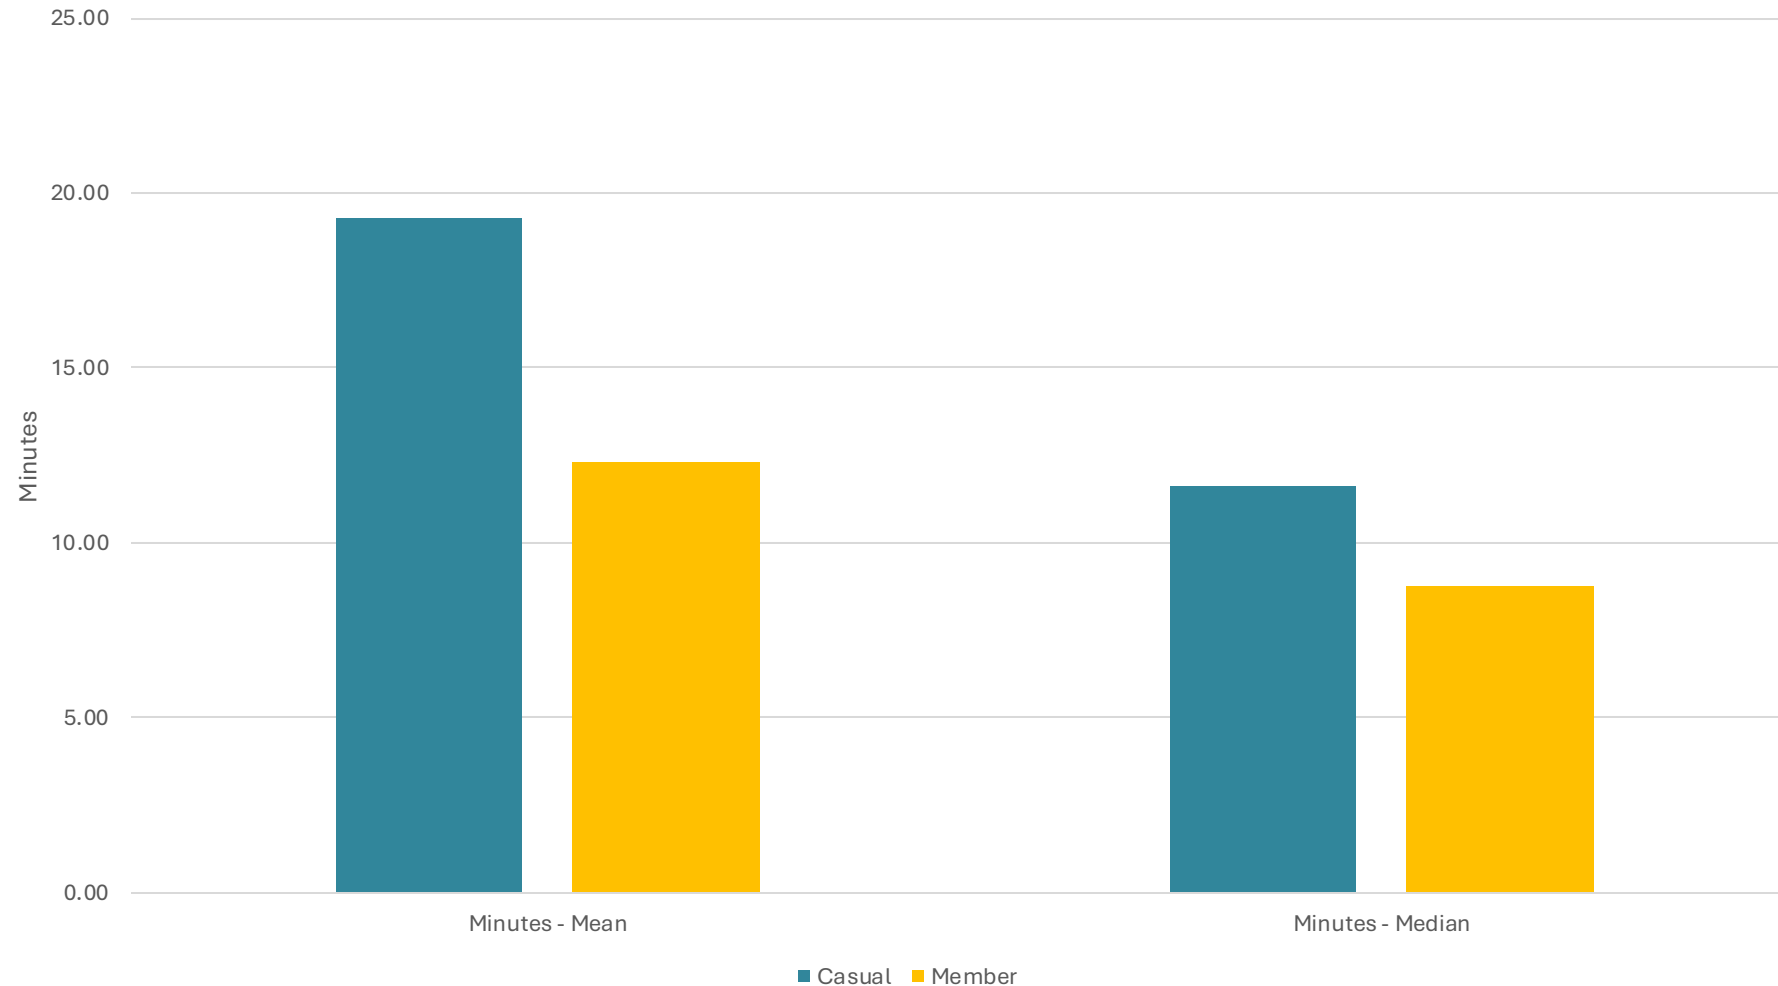

Data Sources:

- Source: Divvy / Motivate International Inc.
- Range: 12 months, July 2025 – June 2026.
- Key limitation: the data contains no (PII). Each row = ride record, not a unique rider

Data Cleaning:

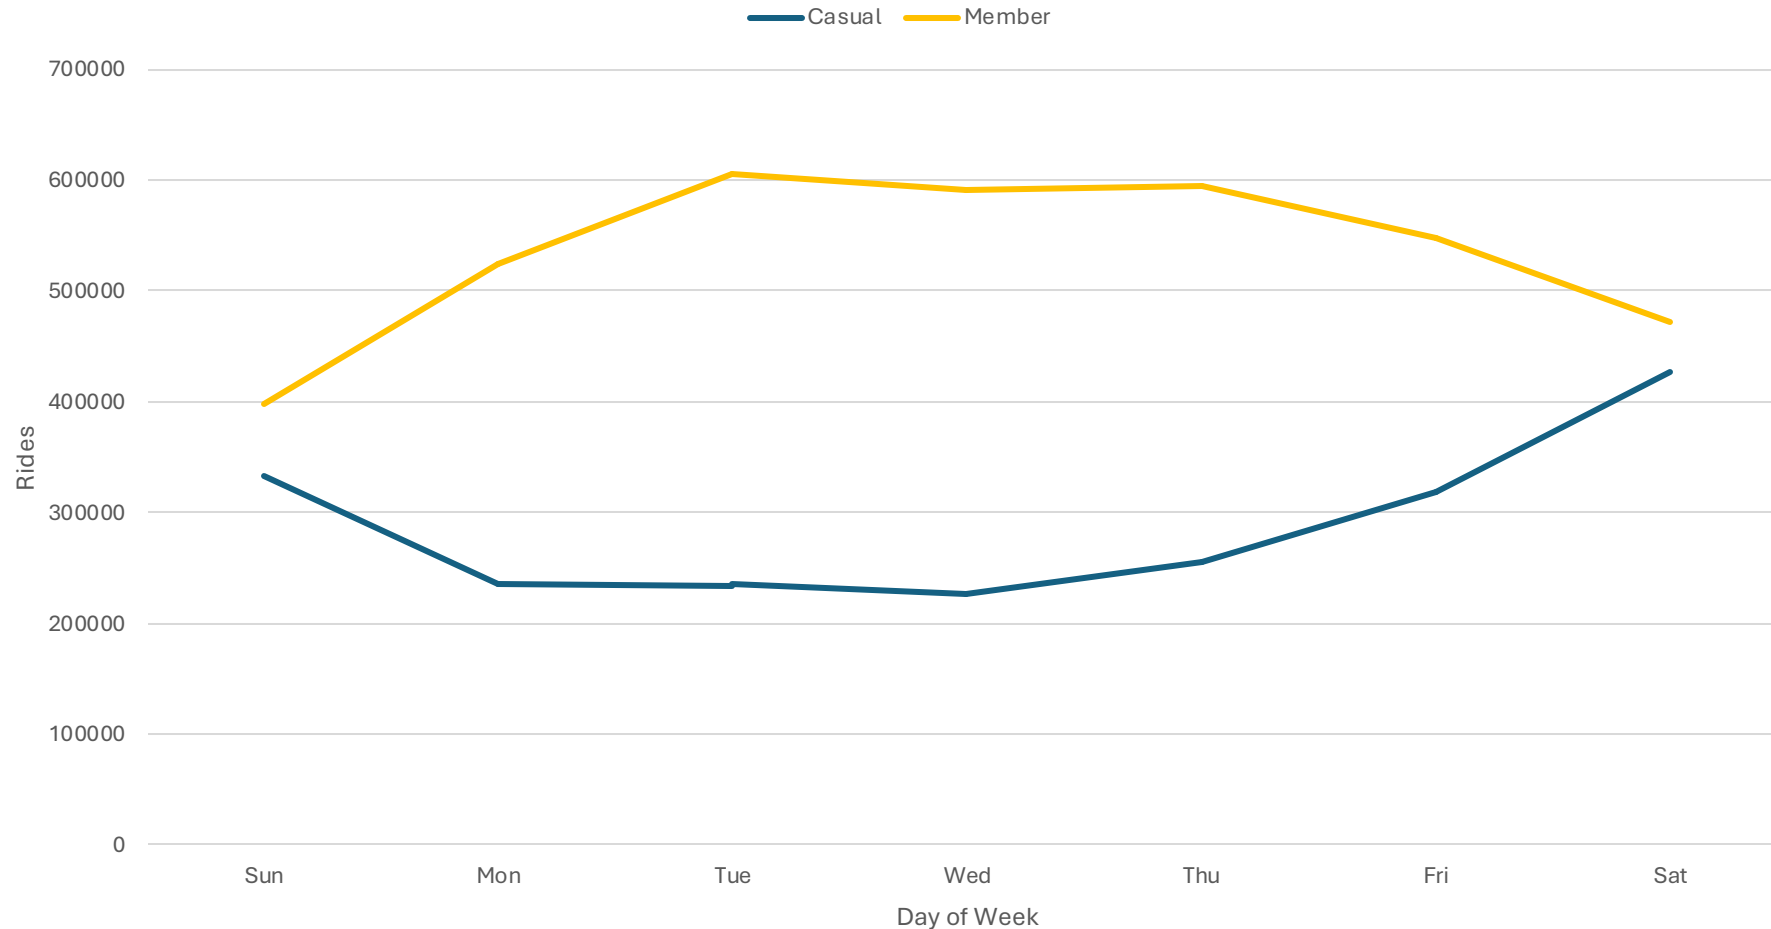

- Removed rides > 24 hours (likely lost/stolen bikes)
- Removed rides < 60 seconds ("false starts")
- Result: **5,764,564** valid rides for analysis (less than **4%** excluded)

Finding #1: Ride Duration

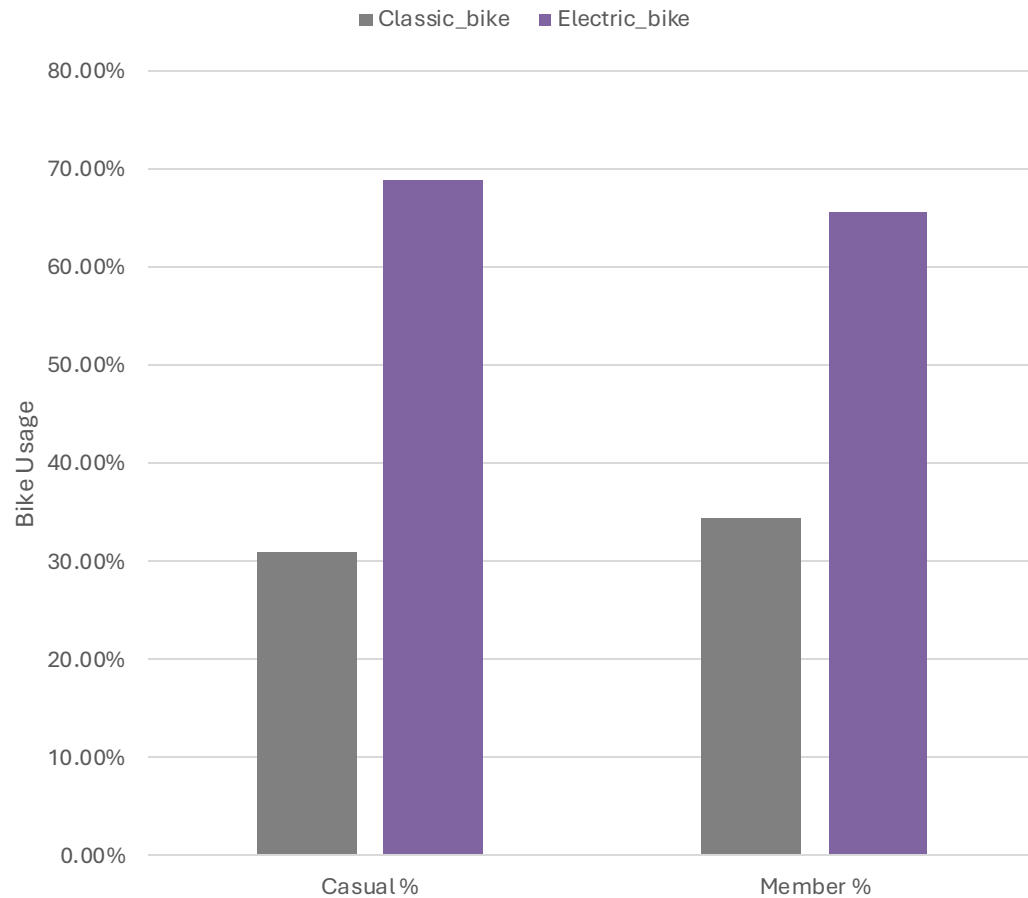

"Casual riders take longer trips (~19 min) but far less often than members (~12 min, more frequent)"

Finding #2: Weekly Timing

"Casual riders peak on weekends — members peak on weekdays"

Finding #3: Bike Type & Seasonality

"Casual riders slightly favor electric bikes (69% vs. 66%)"

"Casual usage is far more weather-sensitive (-93% in winter vs. -75% for members)"

Recommendations:

1. Weekend Membership Offer:

Target weekend usage + e-bike perk

2. Target Summer Peak Demand:

Launch campaign during July–August peak

3. Increase Availability During Summer Peaks:

Ensure bike supply at recreational stations in peak season
